The Canon includes Avicennas views on the treatment of fractures, dislocations, tuberculosis, diseases of childhood, eyes diseases and neurological diseases [20, 21, 22, 27]. Avicenna notes that fractures and dislocations are the worst injuries, and is well aware that this is likely to cause pain and disfigurement. At the same time, there is concern that patients can suffer from fever if they do not receive prompt treatment, and this may result in brain damage. Therefore,

Avicenna and his disciples emphasize prompt diagnosis and treatment to reduce the associated negative effects [21, 28, 29]. al qanun fi al tibbon pdf download Avicenna established that all people are subject to the four forces; gravity, atmospheric pressure, the force of cohesion, and friction. He explained that the action of gravity is on the earth, and this causes the surface of the earth to move downward. Air pressure causes bodies to rise up to a given height, which when it reaches the coast of water, it turns into an incline and begins to move in the direction of the shore. Movement of water may also be caused by the force of cohesion and friction, and he also distinguished between stones and minerals. Due to the potential damage this kind of injury may cause, Avicenna and his disciples stressed the need to administer the correct treatment to patients with fractures and dislocation quickly and safely. Al-Razi was born in present day Iran around 841/26. He received his early medical training from the renowned physician, Al-Majusi, then moved on to study in Isfahan at the Madrasa al-Zahra. Al-Razi's work, Medicine of the Classics, is an attempt to bring back the golden days of ancient sciences. The work is an encyclopaedia in three parts: the first part contains general introductions about the science of medicine and its history, he then proceeded to discuss the various opinions of the earlier doctors on the causes of obesity, finally he has described in some detail the treatments he used in the treatment of obesity. All this knowledge became the basis of Al-Razi's work, Al-Hawi Fit-Tibb (An Encyclopaedia of Medicine). 5ec8ef588b
